BE THE CHANGE, BE *essential*

Essential, the result of a collaborative effort...

Designers, material engineers, production technicians and recycling specialists work tirelessly, hand in hand, to achieve ambitious goals and meet the challenges of design, manufacturing and marketing. From this collaborative, the Essential ski was born, a unique new Rossignol model, eco-designed with its complete life cycle developed in a circular economy.

... Which brings together all our communities in our global and open vision of outdoor activities

Because with Essential ski we have the power to act, we invite all mountain lovers to get more involved at their own level. Because when everyone contributes with their means, and cooperation is the rule, then everything becomes possible!

Recycled, Certified & Bio sourced materials represent 73% of the ski.

34%
Recycled materials

39%
Bio Sourced materials
32,7%
of which is beech wood
from responsible forests

The ski is recyclable at 77%, 7 times more than a traditional ski.

35% ALUMINIUM

Recycled in organized facilities, aluminum is infinitely recyclable today.

35% WOOD

Wood chips are reused in various construction materials. We are actively working on solutions that will allow these to be reused in future Rossignol skis.

7% STEEL

Recycled in organized facilities, steel is infinitely recyclable today.

12% PLASTIC

Sorted, recovered, and repurposed as a source of energy. We work actively with the recycling sector.

5% FINE WOOD

Sorted, recovered, and repurposed as a source of energy. We work actively with the recycling sector.

6% WASTE

Throughout the different stages of grinding and sorting ski materials, only 6% goes towards waste.

77%
RECYCLABLE

17%

by **ROSSIGNOL** GRUPE

ECO-CONCEPTION

ECO-DESIGNED RANGES

Our skis have been developed with close attention to the selection of raw materials and the use of recycled materials to minimise our environmental impact.

PEFC™ CERTIFIED

67% of the range is certified with wood core PEFC™ labeled.

CLEAN ELECTRICAL ENERGY

97% of the range is made thank to clean electrical energy.

MADE IN EUROPE

100% of the range is made in Europe.

RECYCLED MATERIALS

Edges are made from up to 20% of recycled steel.
Bases are made from up to 80% of recycled material.

700 KM

is the longest distance between our factory and our logistics platform.

ENVIRONNEMENTAL MANAGEMENT

All our sites are ISO 14001
Artès (Spain)
Sallanches & Nevers (France).

RACE | HERO TECHNOLOGIES

HERO ATHLETE

WHO ARE THEY FOR?

Designed for all active champions, from 6 years of age for the Juniors all the way up to racers on the FIS circuit.

SIDECUT FIS RULES

ROCKER PROFILE FULL CAMBER

100% camber - 0% rocker

RECTANGULAR FULL SIDEWALL

A horizontal layering of core materials (wood, fiberglass, metal, etc.) combined with full-length vertical sidewalls to deliver optimized edge grip, precision, balance and power.

HERO MASTER

WHO ARE THEY FOR?

For expert skiers seeking performance and power, as well as for passionate racers outside the FIS circuit (Flèches ESF, Course Master, Eurotest events, etc.).

SIDECUT OVERSIZED SIDECUT

ROCKER PROFILE FULL CAMBER

100% camber - 0% rocker

LONG TURN NEW RADIUS

SHORT TURN NEW RADIUS

CASCADE TIP TECHNOLOGY

Our CASCADE TIP construction employs staggered lengths of metal and fiberglass through the tip of the ski, reducing swing weight and controlling tip torsion for smoother turn initiation, increased precision and more effective full-length edge grip.

LINE CONTROL TECHNOLOGY

An evolution of World Cup racing innovation, Rossignol's patented new LCT construction harnesses pure power and energy, delivering fluid stability in all conditions. Featuring a central « power rail » integrated from tip-to-tail, LCT eliminates counter-flexing of the ski to ensure consistently smooth stability and dynamic control of your line.

HERO ELITE

WHO ARE THEY FOR?

For expert skiers who like to challenge themselves on the slopes or in flèche and chamois races, and for ambitious skiers seeking to experience all the emotions of competition on the piste.

SIDECUT

OVERSIZED SIDECUT

ROCKER PROFILE

PISTE ROCKER

95% camber - 5% tip rocker

V-TITANAL / V-CAM / V-FIBERGLASS

The "V" shape brings a perfect ski balance in order to keep the right line in rugged conditions. The groove all along the sheet ensures a stiffer longitudinal bending. Stamping generates a phenomenon of mechanical anisotropy.

TECHNOLOGIES

FORZA

ITS ALL ABOUT TAKING THE RIGHT ANGLE

Commitment and precision characterize FORZA. It is the perfect combination of elegance and power. Carving is reborn, the sensations are multiplied tenfold. On the slopes, the FORZA provides unique angulation to rediscover carving skiing in its pure state.

SIDECUT

SUPERSIZED SIDECUT

Evolution of oversized sidecuts for wider tip skis. Instant Carving, power and acceleration.

ROCKER PROFILE

PISTE ROCKER

95% camber - 5% tip rocker

RTT - REINFORCED TORSION TIP TECHNOLOGY

The Reinforced Torsion Tip is a technology adapted and dimensioned for this new type of modern ski with extreme wide tips. In order to maintain precision and full engagement with tip widths greater than or equal to 130mm, we must reinforce the lateral deformation of the front of the ski. The particular « tie » shape of the Titanal layer is embedded in the tip for better cohesion and power transfer.

V-TITANAL / V-CAM / V-CA

The "V" shape brings a perfect ski balance in order to keep the right line in rugged conditions. The groove all along the sheet ensures a stiffer longitudinal bending. Stamping generates a phenomenon of mechanical anisotropy.

LCT - LINE CONTROL TECHNOLOGY

An evolution of World Cup racing innovation, Rossignol's patented new LCT construction harnesses pure power and energy, delivering fluid stability in all conditions. Featuring a central "power rail" integrated from tip-to-tail, LCT eliminates counter-flexing of the ski to ensure consistently smooth stability and dynamic control of your line.

ALL MOUNTAIN | EXPERIENCE TECHNOLOGIES

SIDECUT

ALL TRAIL SIDECUT

The ALL TRAIL sidecut is designed to engage the tip from the very start of the turn and strengthen the action of the tail.

ROCKER PROFILE

ALL TRAIL ROCKER

The ALL TRAIL is designed to ensure smooth and progressive absorption of uneven areas of terrain in all types of snow.

DRIVE TIP SOLUTION

- Directional fibres combined with a flexible material (visco)
- Absorbs and eliminates vibrations
- Snow feel and control to boost confidence.

ALL TRAIL RATIO

The perfectly tailored profile and sidecut guarantee ideal behaviour of the tip in any conditions.

FREERIDE | SENDER TECHNOLOGIES

SIDECUT

PROGRESSIVE SIDECUT

Firm grip while opening up more scope and fluidity to cruise, dazzle and carve on all terrain and in any snow conditions.

ROCKER PROFILE

FREE ROCKER

60% camber - 25% rocker tip - 15% rocker tail

DOUBLE LCT ABS

The double LCT ABS construction is an adaptation of Line Control Technology on wider skis to improve line control with power and energy.

AIR TIP

The AIR TIP lightens the tip and tail of the ski for improved manoeuvrability and turn control in all snow conditions.

EXTENDED CORE

The Extended Core construction increases ski-snow contact and the torsional stability of the ski, boosting precision and control in varied snow conditions.

DAMP TECH

The DAMP TECH insert at the tip reduces ski vibrations to absorb irregularities in the terrain.

TOURING | ESCAPER TECHNOLOGIES

SIDECUT

ALL TRAIL SIDECUT

Instant turn initiation and powerful exit for smooth carving performance on any terrain.

ROCKER PROFILE

FREE ROCKER

60% camber - 25% rocker tip - 15% rocker tail

V-SKIN ANCHOR

Attachment system allowing easy and intuitive mounting of skins on touring skis.

LIGHT POPLAR WOOD CORE

This new core is the perfect combination of lightness and performance. It is about 30% lighter than a regular poplar and keep all its advantage of consistency, elasticity and well balanced flex.

AIR TIP

The AIR TIP lightens the tip and tail of the ski for improved manoeuvrability and turn control in all snow conditions.

NANO TITANAL

A 0.4 mm ultra-thin Titanal insert improves performance and precision while increasing the support of the bindings.

AERO PROFILE

The ski's dimensions are optimised to reduce inertia and increase grip.

NANO BASALT

The new 0.3 mm Basalt fibre provides a high level of elasticity and performance while optimising the weight.

PAULOWNIA WOOD CORE

The paulownia wood core reduces the ski's weight by up to 30% for improved agility and handling while retaining control.

NANO CARBON

This ultra-thin 0.3 mm carbon layer improves stability and grip on snow while optimising the ski's light weight.

PAULOWNIA & CELL CORE

Designed for free-touring, the vertical strips of the PAULOWNIA and MICROCELL wood core create a perfect fusion of extremely light weight, shock absorption and stability.

CARBON STRINGER

Positioned under the foot, the ultra-light CARBON STRINGER provides optimum resistance, stability and versatility.

SKINS

COMPOSITION

100% NYLON: Lightweight, a thin design and long life span. Still with quality standards, the 100% Nylon skin opens the door to backcountry exploration.

MIX (70% MOHAIR / 30% NYLON):

The classic skin mix, now lighter and with a thinner design. The skin for all enthusiastic skiers.

EVER DRY 3.0

EVER DRY 3.0 represents a step forward for the environment: it is the first fluorine-free treatment for skins.

GRIP

Good grip on ascents is very important. A combination of materials and fibre attachment systems make skins very stable in all conditions and throughout their entire life span.

SSL

Thinner layers make the SAFER SKI LIGHT (SSL) membrane 12% lighter, i.e. 150g/m². SSL reduces the weight of a pair of skins by around 60 to 75g while maintaining 100% watertightness.

CUSTOMIZZAZIONE

TRUE FORM MOLDING MACHINE

The customisation machine has been developed by the Rossignol R&D teams to optimise the customisation of the new HI-SPEED and PURE boots.

It consists of 2 tubes that propel hot air into the liner.

Optionally, heated covers can be used for complete customisation by heating the stem of the liner.

RVL1100

3 PROGRAMS

PRE-HEAT: 2 minutes' heating - to heat the boots to the right temperature for trying on.

NORDIC: 4 minutes' heating to customise Nordic boots.

ALPINE: 8 minutes' heating to customise alpine boots.

PROCESS

This involves shaping the liner to the skier's foot.

We have developed a new thermoforming machine - the TRUE FORM MOLDING UNIT - which allows highly precise thermoforming.

This machine has an arm that blows air at a temperature of 80° to thermoform the padding and tongue. But the biggest innovation is the use of heated covers - inspired by the motor racing world - to thermoform the external material of the liner for a perfect result.

1. FULL CUSTOMISATION - HOT AIR + HEATED COVERS

Ultimate customisation.

- Place the liners under the arm.
- Close the sleeve.
- Wrap the liner in the heated cover.
- Press "Alpine".
- Heat the 2 elements for 8 minutes (automatic timer).
- Leave the liners for 2 minutes and then put them back in the shells.
- Put the boot back on the customer's foot. Tighten it slightly and leave it on for 10 minutes with the buckles closed.

2. CUSTOMISATION

Liners in the shell or outside the shell if you prefer.

- Place the boots under the arms.
- Pull up the sleeve and fasten it below the buckle on the cuff.
- Press "Alpine".
- Heat for 8 minutes (automatic timer).
- Leave for 2 minutes before putting it on the customer's foot.
- Tighten it slightly and leave it on for 10 minutes with the buckles closed.

3. QUICK FIT

Comfort heating - QUICK HEATING INSIDE THE LINER.

- Liners in the shell
- Place the boots under the arms.
- Press "Pre Heat".
- Heat for 2 minutes (automatic timer).
- Ready for a quality test.

STRUCTURE

GENERATIVE DESIGN STRUCTURE

Generative design is unique to Rossignol. It's part of the brand's DNA. This structure allows us to optimise material thicknesses: more rigid on the lower part of the shell and on the back of the cuff.

Different thicknesses are used to optimise the weight. It can be combined perfectly with the Dual Core technology.

STRUCTURE GENERATIVE DESIGN GRID

The Generative Design Grid structure of the Alltrack boots allows material thicknesses to be reduced to save weight, while ensuring a sufficiently rigid structure for excellent skiability.

SENSOR MATRIX

The design of all 104 mm boots is structured to wrap the foot more effectively and give the boot an original personality.

JUNIOR CELLULAR DESIGN

The boot design is intended to be close to the foot, with thin layers to save weight. The HERO J4 model weighs 1,090 g (1/2 pair). It also allows excellent progressive flexion, which is essential for good skiability.

POSITION OF THE AXIS OF ROTATION

To adapt to the current ski, the position of the axis, which has a major influence on the structure of the boot, has been modified.

AXIS OF ROTATION VS ALLSPEED

The axis of rotation is positioned 1.2 cm higher.

- > More edge-to-edge effectiveness
- > Greater precision
- > More stability in turns

AXIS OF ROTATION VS HERO

Same angle, same height as the HERO boots, but the axis of rotation is further forward: 1 cm.

- > Less radical and aggressive
- > Easier turn initiation
- > More progressive flex

DUAL CORE

DUAL CORE involves injecting materials with different hardness levels or of different types into the same mould. The result is a sandwich construction with an ultra-thin layer of hard materials on the outside encapsulating the softer materials inside. This makes it possible to create zones of different hardness on the boot, without adding layers of plastic.

This technology can be used to accurately fine-tune the progressive flex, rear support and rebound.

DUAL CORE RACE

The entire HERO WORLD CUP and HERO range features the DUAL CORE technology.

The process involves three injection points on the shell and two on the cuff. This technology can be used to accurately fine-tune the progressive flex, rear support and rebound. It also allows for highly effective lateral power transfer.

DUAL CORE ALLTRACK

The DUAL CORE technology works in synergy with the Generative Design Grid. It makes it possible to reduce weight while retaining rigidity. This is essential to ensure a high level of skiability.

On the ALLTRACK boots, the Dual Core technology is used on the lower part of the shell - which increases torsional rigidity and makes the boot easier to put on.

DUAL CORE HI-SPEED

In black: PU + Carbon
In grey: PU

CARBON DUAL CORE

The first injection is made using Polyurethane reinforced with carbon fibres. On the one hand, this very rigid material helps to strengthen the lower part of the shell and optimise resistance to flexion and torsion, and on the other hand, it strengthens rear support, thus increasing the boot's precision.

ASYMMETRIC DUAL CORE CUFF

The DUAL CORE technology helps to strengthen the inner side of the cuff to provide better grip in turns and greater support.

LINER

LINER 5 ZONES PRE-SHAPED FULL CUSTOM

The liner is entirely thermoformable (external stem/padding and tongue)

What makes it different is a special construction that allows a high level of thermoforming in the ankle bone, metatarsal (1st and 5th) and navicular zones to mould perfectly to the shape of the foot - while the rest of the stem retains its properties for perfect support. This ensures excellent support and therefore very high technical properties.

PRE-SHAPED LINER

The liners are pre-shaped around the ankle bones for greater comfort and support.

SEAMLESS TOE BOX

To increase the efficiency of the thermal insulation - we have designed a liner with a toe box that retains heat inside the liner. Thermographic studies show that this new design has reduced energy wastage by around 20%.

FULL CUSTOM LINER

For improved precision and performance, these liners are fully customisable to mould perfectly to the shape of the foot. The internal padding, external stem and tongue are all customisable.

Customisation is carried out using the new thermoforming machine - True Form Moulding Unit - using heated covers for greater effectiveness on the stem - with the Alpine programme - 8 mn.

**FULL
CUSTOM
LINER**

CUSTOM LINER

Only the internal padding of these liners can be customised.

**CUSTOM
LINER**

THERMAL INSULATION

HIKE MODE (ALLTRACK)

On the ALLTRACK boots:

1/ An optimised axis of rotation - 6 mm lower.

2/ A new construction at the bottom of the shell cut away at the rear.

> wider opening of the cuff towards the rear angle range of motion = 50° for very high freedom of movement on ascents

3/ A metal/metal unlocking mechanism for the cuff to create a more rigid boot structure. This design results in a higher flex index and a level of performance close to that of a boot with a fixed cuff.

FOREFOOT INSERT (ALLTRACK)

To allow smoother foot entry, an insert made from flexible materials is positioned at the top of the shell for easier opening of the sides.

This ensures that the boot is still easy to put on, despite the high flex index and very rigid plastic materials.

CONFIGURATION

Configuration is a key asset for these new boots - all the settings combined with CUSTOMISATION of the liner allow you to offer customers a real benefit in terms of both comfort and performance.

PERSONALISATION

FLEX ADJUSTMENT

The boot's flex can be adjusted up or down by changing the position of the screws on the back of the cuff.

Central position - the flex shown on the boot.

Moving the screws as pictured in the diagram allows you to adjust the flex by 5 points (+/-).

FORWARD LEAN ADJUSTMENT

This setting allows you to adjust the forward lean of the boot to make it more aggressive.

In standard position - when the boot comes out of the box - the spoiler is in the low position and the angle is 10.6°

Adjusting the spoiler to the upper position creates a 6 mm forward lean and a 6 mm height gain, for a forward lean angle of 12.6°.

CANTING

Adjustment of the lateral angle of the cuff by +/- 1° to adapt to the shape of the lower leg.

CATCHES

The catches on the cuff can be adjusted to 3 positions to increase or reduce space for the calves.

MATERIALS

GRILAMID: This Thermo-Plastic material is one of the lightest on the market and offers very good resistance. It can be used with high-density modules to reduce thicknesses. The ALLTRACK ELITE 130 LT, ALLTRACK ELITE 110 LT WOMEN, ALLTRACK PRO 120 LT models all have Grilamid shells.

POLYURETHANE: All boot shells in the ALLTRACK range are made from Polyurethane for better skiability and easier entry/exit.

GRIPWALK

All Rossignol boots are:

- pre-mounted with Gripwalk heelpieces - which are easily recognisable: thanks to their markings and a colour code on all models (the rigid areas are orange)

- Gripwalk compatible: We have 4 Gripwalk heelpiece models for all boots in the range.

HEAT MODELS

The **PURE PRO HEAT** model features a heating system that can be adjusted via Bluetooth using a Therm-ic® app - available to download free of charge using the attached link.

www.therm-ic.com/fr/content/13-application-thermic-heat-control.

This app allows you to very easily adjust the temperature setting. Two modes can be used to manage the batteries.

- **ECO MODE** allows you to choose a heating period - for example: 4 minutes heating followed by 2 minutes off.
- **MOVEMENT MODE:** heating starts each time the skier stops.

USAGE TIPS

Using the batteries - The batteries must be charged before using for the first time.

1. Connect the USB cable. The charging indicator lights up and turns green. Then plug in the two connectors linked to each boot. The indicator turns red and charging begins.
2. When the batteries are fully charged, the charging indicator turns green. Charging stops automatically. The charging time is between four and six hours.

ging stops automatically. The charging time is between four and six hours.

3. Unplug the two boot connectors from the USB cable.
4. Connector trap on the Boot Integrated System. During and after charging, the Boot Integrated System remains in the mode in which it was set before charging.

INSTRUCTIONS FOR USE

The heating system integrated in Therm-ic® ski liners has four modes: stop and levels 1, 2 and 3. These modes are indicated by the LED for the heating speed. The number of flashes of the LED indicates the selected heat setting. The integrated heating system can be adjusted to three different settings (level

1, level 2 and level 3) using the control panel.

If the LED indicating the heating level is not illuminated, this means the heating system integrated in the Therm-ic® ski liners is switched off.

SWITCHING ON:

Press and hold (for around 3 seconds) the function button to set the integrated system to the lowest heating level. Holding the button for more than 6 seconds will cause the liners to go into safety mode and switch off.

SETTINGS:

Press the function button once (for around a second) to increase the heat setting (level 1, level 2 or level 3).

- > **LEVEL 1:** one flash, low heat setting.
- > **LEVEL 2:** two flashes, medium heat setting.

> **LEVEL 3:** constant illumination, high heat setting. If the system is in pause mode, you will first need to activate it.

PAUSE MODE:

If you do not press the button within 10 seconds, the system will switch to pause mode. Press the function button (for around a second) to activate the system, which will then switch back to the last selected heat setting.

SWITCHING OFF:

To switch off the system integrated in Therm-ic® ski liners, press and hold the button (for three seconds, until the heat setting LED is no longer illuminated).

INSTRUCTIONS FOR THE BLUETOOTH PAIRING SYSTEM

1. Enable Bluetooth on your phone and then open the Therm-ic® Heat Control app.
2. Connect the batteries: when the start screen appears, switch on your two batteries by pressing and holding each button. Continuous illumination of the red LED indicates that your batteries are switched on. Rapid flashing of the LED shows that Bluetooth is now enabled.
3. Add the batteries: click the "+" button in the middle to show your batteries in Bluetooth. Then click "add" to connect the two batteries to your phone.
4. Heat settings: the first screen allows you to adjust the heat setting for both batteries at the same time. You can increase or reduce the level of heat from 1 to 10. You can also switch off the heat temporarily by pressing pause.
5. Heat settings - individual: the second screen allows you to adjust the heat setting for each battery individually. By default, they are at the same level, but this option can be customised.

CUSTOM LINER

HOW DO YOU CHOOSE YOUR FIT?

To make it easier to understand the different fits available, we have drawn our inspiration from the clothing industry and arranged our fits into four categories. The different fits have been designed to address various foot shapes and also deliver the level of support required, bearing in mind its direct influence on performance.

skinny fit

An extremely narrow fit for women skiers in search of excellent support to ensure a high level of skiability. It is also the ideal fit for women with slender feet looking for excellent foot support. Last 98 mm

slim fit

A narrow fit for all proficient women skiers prioritising perfect foot support without any trade-off in comfort. Last 100 mm

regular fit

A classic fit that will satisfy a large number of women skiers wishing to strike the perfect balance between support and comfort. Last 102 mm

relax fit

A generous fit for all women skiers looking mainly for comfort, as well as for all those with fairly wide feet. Last 104 mm

LINERS TECHNOLOGY

All women's boots have liners that are specifically designed to suit the female body shape. Women's liners are cut lower to accommodate differences in calf shape. They also have a more open shape for a more comfortable fit. The padding in the upper liner is very flexible to prevent any discomfort around the calf. The lining materials are very soft and comfortable, and are designed with a simple objective in mind: to make you want to put your foot in the boot.

THERMAL INSULATION

DEDICATED THERMAL INSULATION: since insulation is especially important in women's boots, all liners have passive thermal insulation based on the following materials: **MERINO wool**, **WINTHERM®** and **THINSULATE STRETCH®**. Our laboratory-based thermal imaging studies show that these materials give our liners excellent thermal insulation.

THE LINERS HAVE EITHER:

1 **TOTAL THERMAL INSULATION:** the insulator is all around the foot.

2 **FOREFOOT THERMAL INSULATION:** the insulator is around the forefoot in the toe area.

MERINO WOOL REDA ACTIVE

MERINO WOOL

More than a thermal insulator, Merino wool is a natural thermal regulator. Its main qualities are: thermal control, soft feel, breathability, odour control and fast drying.

WinTherm

WINTHERM

Wintherm proved to be an especially effective thermal insulator in our laboratory tests. Positioned at the forefoot, it comprises a sheet of micro-perforated aluminium that allows air to circulate and a polar fleece material to guarantee warmth and comfort.

3M Thinsulate INSULATION

THINSULATE® STRETCH

Used mainly in clothing, this extremely fine fibre improves freedom of movement thanks to its elasticity. In a liner, it works ideally with the other materials to provide perfect foot support for great skiability.

PRIMALOFT

PRIMALOFT

Recycled fiber used for technical gear insulation. Very light which is very consistent with Alltrack LT liners. The combination with the other materials of the liner gives a perfect foot hold to improve skiability.

SHELLS

Women's boots use the same shells as unisex boots which means that all features relating to the last, fit and performance are identical.

GENERATIVE DESIGN STRUCTURE + DUAL CORE

This specific design allows different thicknesses to be distributed according to the zones of the boot to obtain the right WEIGHT. On the PURE boots, the Generative Design is applied more softly on the cuff with thinner layers to respect the lower leg wrap. The associated DUAL CORE technology boosts the boots' performance.

CUFFS

The height of the cuff is significantly lower in comparison with a unisex cuff. The tulip-shaped rear section easily accommodates a woman's natural calf shape. It is less structured to take better account of female skiers' power.

PERSONNALISATION

Personalisation involves adjusting all possible 'mechanical' settings to tailor the boot to the skier's foot.

Adjustment of flex - canting, catches.

CUSTOMISATION

This involves shaping the liner to the skier's foot - using the Thermo True Form Moulding machine - for details of the process see page 67.

2 types of customisation:
FULL CUSTOM: stem, padding, tongue
CUSTOM: padding

CHAUSSON 5-ZONE FULL CUSTOM

The **PURE ELITE 120** model has a 5 ZONE FULL CUSTOM liner - with highly thermoformable ankle bone, metatarsal (1st and 5th) and navicular zones to mould perfectly to the shape of the foot - while the rest of the stem retains its properties for perfect support. This provides the assurance of excellent support and consequently very high technical performance.

SEAMLESS TOE BOX

To increase the thermal insulation, we have designed a liner with a toe box that retains heat inside the liner.

Thermographic studies show that this new design has reduced energy wastage by around 20%.

DOUBLE STRAP

This innovative and patented strap is very intuitive to handle. It makes the buckle easier to use by allowing you to close it with both hands - in a straight line. It is therefore extremely efficient and precise - with a very wide tightening range.

IMPACTS

PROTECTS YOU LONGER

93%* of skiers know that replacing your helmet after a heavy fall is highly recommended. But how many of them do this?

Based on this finding, Rossignol has developed a new technology designed to offer more reliable and lasting protection for skiers, taking into consideration the actual usage conditions for a ski helmet. During its storage, transportation and use, a ski helmet is subjected to numerous constraints. Even low-intensity impacts, often leaving no visible trace of damage, can impair a helmet's protection and make it less resistant. Therefore, to ensure skiers stay protected over time, Rossignol uses a technology called **IMPACTS** in its range of ski helmets. This technology offers improved protection against multiple impacts, without any compromise in either comfort or aesthetics.

*results after a study carried out on a panel of 1,000 skiers

1 CONSTRUCTION

ABS helmets are made up of two elements: a 3 mm-thick ABS shell and an internal absorbing foam which are injected separately and then assembled. The light **INMOLD** construction includes a 1 mm preformed polycarbonate sheet with internal absorbing foam injected directly into the shell for an even lighter weight.

The development of the **GLUED ON** structure for our junior helmets provides a good compromise between resistance and durability.

2 VENTILATION

ADJUSTABLE VENTS enable airflow to be increased or decreased for more control over heat escape. This provides personalised comfort throughout the day, no matter what the conditions.

PERMANENT VENTILATION uses ventilation channels to regulate the temperature and increase comfort by enabling hot air and moisture to escape.

3 FIDLOCK BUCKLE

Some of our helmets feature an extremely fast Fidlock magnetic closing system for easier operation with ski gloves.

MICROMETRIC BUCKLE

To allow easier use when wearing gloves as well as very precise adjustment, the giant slalom helmets have a micrometric buckle.

4 SIZE ADJUSTMENT

The **R-FIT SYSTEM** is an adjustment system that lets you adjust your helmet for greater support, safety and comfort. This ideally user-friendly system consists of two arms clipped into the helmet and an adjustable dial.

5 EARPADS 2.0

The **EARPADS 2.0** technology brings you greater safety on the slopes, allowing you to remain aware of the sounds around you while effectively protecting your ears.

6 MAGNETIC GOGGLE CLIP

The goggle clip developed for the back of the **ALTA IMPACTS** helmet is magnetic. It allows goggles to be positioned quickly and accurately on the helmet, even when wearing gloves.

1

LENS SHAPE

TORIC LENSES provide both horizontal and vertical curvature, extending the lateral field of vision while optimising the overall size of the goggles. Rossignol and Zeiss have pooled their expertise to develop a toric lens offering a very wide field of vision, optical performance and maximum comfort while retaining compact goggle dimensions to ensure a perfect fit with a helmet.

SPHERICAL LENSES provide both horizontal and vertical curvature, following the shape of the retina. This technological effect reduces optical distortion to a minimum.

CYLINDRICAL LENSES provide solely horizontal goggle curvature. This gives them a larger field of vision and therefore improved comfort when descending.

2

FOAM

The density and quality of the foam are important factors to consider. Featuring single, double or triple-density foam, Rossignol goggles stay securely in place and feel comfortable to wear thanks to the very soft fleece covering.

3

STRAP

To help goggles stay in place over a helmet - some goggle straps are coated in silicone.

4

FOG CONTROL

An anti-fog coating is applied to the lens with the aim of guaranteeing the best possible visibility in all conditions.

5

MAGNE'CLICK

Rossignol's **MAGNE'CLICK** technology allows very fast lens changes to maintain optimal vision in changing weather conditions. Little magnets and clips keep the lens secured to the frame throughout an entire day on the slopes.

6

ZEISS LENS

ROSSIGNOL works with the optical expert **ZEISS** to develop high-performance, technical goggles that help you to ski in all conditions.

ZEISS' **Sonar** technology emphasises contrasts by significantly improving details and the perception of snow depth. This provides clearer visibility of shadows, textures, bumps, changing terrain and potential hazards. This cutting-edge technology allows you to ski in constantly changing conditions and anticipate risks more effectively to improve your safety and performance.

sizes : 105-125/5	diameter : 16 mm	weight : 220 g	type : Aluminium Dural
grip : Women mono mat	strap : Regular	basket : Regular - 60 mm	tip : Steel

RACE JUNIOR

RDL6000 HERO GS-SG JR

sizes : 90-110/5	diameter : 16 mm	weight : 180 g	type : Aluminium Zicral
grip : World Cup Junior	strap : Regular Junior	basket : World Cup - 54 mm	tip : Carbide specificity : Triangular profil

RDL6010 HERO SL JR

sizes : 90-110/5	diameter : 16 mm	weight : 180 g	type : Aluminium Zicral
grip : World Cup Junior	strap : Regular Junior	basket : Race - 51 mm	tip : Carbide specificity : Triangular profil

RDL6020 HERO JR

sizes : 90-110/5	diameter : 14 mm	weight : 165 g	type : Aluminium Dural
grip : World Cup Junior	strap : Regular Junior	basket : Race - 51 mm	tip : Carbide specificity : Triangular profil

JUNIOR

RDK6000 TELESCOPIC JR

sizes : TU	diameter : 12/14 mm	weight : 170 g	type : Aluminium Zicral
grip : Junior	strap : Regular Junior	basket : Junior - 60 mm	tip : Steel specificity : Telescopic

RDH6040 TACTIC JR RED

RDI6030 TACTIC JR GREY

RDJ6000 ELECTRA JR PINK

sizes : 70-105/5	diameter : 14 mm	weight : 165 g	type : Aluminium Dural
grip : Junior	strap : Regular Junior	basket : Junior - 60 mm	tip : Steel

TECHNOLOGIES

TOURING GRIP

The Touring Grip has been developed by Rossignol teams to meet the specific needs of ski tourers.

- A handle designed to easily handle touring and splitboard bindings, which can also be used as a hook to retrieve something in the snow.
- A 30 centimeters foam under the handle, in order to multiply the grip possibilities
- A very light strap made of recycled polyester, and a single material handle made of recycled material.

RACE PROTECTIONS

RKLP100 HERO LEG PROTECTION SR
RKLP101 HERO LEG PROTECTION JR
sizes : M-L

RKLP103 HERO FOREARM PROTECTION SR
RKLP104 HERO FOREARM PROTECTION JR
sizes : TU

RKLP102 HERO HAND PROTECTION
sizes : TU

BACK PROTECTIONS

RKMP200 FLEXVENT VEST SR
sizes : S - M - L - XL

RKMP400 FLEXVENT VEST SR W
sizes : S - M - L

RKMP500 FLEXVENT VEST JR
sizes : 10Y - 12Y - 14Y

RKMP502 FLEXVENT VEST KIDS RED
sizes : 6Y - 8Y - 10Y

RKMP503 FLEXVENT VEST KIDS AQUA
sizes : 6Y - 8Y - 10Y

RKMP201 FLEXVENT STRAP SR
sizes : XS/S - S/M - L/XL

RKMP501 FLEXVENT STRAP JR
sizes : 8Y - 10Y

FLEX'VENT

The new solution for our back protection range.

- The back panel is thin, flexible and very light.
- The Flex'Vent range combines new back protectors, new protective fits and new materials chosen for their excellent properties.
